To resolve this issue, follow these steps: Use device Settings &gt; Apps, then tap VyprVPN, then tap Clear Data. When this is complete, try logging in one more time. Change your password to a new 8-14 character password. To reset your Golden Frog password, visit our Forgotten Password page. Keep in the way that user IDs and passwords matter. Also, make sure that you select a password that you have not previously used in your account to ensure a successful password reset. If you need more help, please contact our 24/7 Customer Success Team, who will be happy to help. Since February 2018, VyprVPN is difficult to use in China on Windows, I was rarely able to connect to servers, and I also don't see a list of ping servers. Just read the thread with the same problem (VyprVPN isn't responding to ping-resquests), and according to Justin (Golden Frog Support), I signed out, but now I can't sign back into the app. I am very confident with the account information (no wrong email or password). In the app, it shows that: You seem to be offline! With the internet here still working properly. Does anyone have a solution to this? Now, I can't log back into the app. Solution from Golden Frog: This error appears when you sign in to the VyprVPN app and can occur in windows and Mac desktop apps. It can happen for a variety of reasons, but the root cause is that the app can't access our authentication servers. It sees your connection offline and the logon attempt fails. Although rare, it is generally more susceptible to appearing in corporate, university and other restrictive networks. Try to upgrade your network first: Disconnect the power cords from the modem and router Wait 30 seconds, connect wait 30 seconds, plug in the router Wait 30 seconds, the network is now updated. Next, make sure that you have an active connection to the Internet and that other VPN connections are not active. This includes corporate VPN connections. Temporarily disable running antivirus and firewall programs to see if you can sign in. Antivirus programs and strict firewalls can block the necessary traffic to our authentication servers. If this error persists, follow these steps to create a manual VPN connection and try to sign in when the connection is established: How to configure click the Start menu. Click Settings. On the Settings menu, click Network &amp; Internet. On the left side of the window, select a VPN. Click Add a VPN connection. Fill in the settings listed in the box below. VPN Provider: Windows (built-in) Connection Name: VyprVPN Server name or address: 209.99.72.45 VPN type: Point to Point Tunneling Protocol (PPTP) Type of login information: Username and password Username (optional): Golden frog email address Password (optional): Golden frog password Remember my login information: Click Save. The connection will now appear in the Network &amp; Internet window. Connecting Click the Start menu. Click Settings. On the Settings menu, click Network &amp; Internet. On the left side of the window, select a VPN. Click VyprVPN, and then click the Connect button. You're connected to VyprVPN now! Click Disconnect from this screen at any time to disconnect from the service If you can't sign in to the VyprVPN app, but you've made sure you can sign in with the same credentials on our website, this is most likely due to the case of your username. User IDs have large and small instructions when you sign in to the VyprVPN app, create a manual connection, or request a password reset. Your username must be entered in the same case that is used when registering. If you want to change the case of your sign-in user ID, you can always visit the Account tab in the VyprVPN control panel and click next to the Change Email Address field. If you previously had a VyprVPN free account, you'll experience similar behavior and need to update your account to sign in to the VyprVPN app. Sometimes this can also be a problem with network latency. We recommend that you try a manual connection, connect using a manual connection, sign in, and connect to the VyprVPN app. After connecting to the VyprVPN app, disconnect from the manual connection and enjoy the app! App!
